Fidelis Ikechukwu Edeh ID: 15389e051641f000

has successfully completed a course on Hamoye

# Neural Network, Image Recognition & Object Detection ID: 146ab91e4581f000

Grade: **75.0%**

Every hour, the world loses an area of forest the size of 2500 Maracana Stadium - the biggest football field in the world. Deforestation of the Amazon Basin accounts for the largest share of the forest area lost. This contributes to reduced biodiversity, habitat loss, and climate change. The architecture of the brain inspired the neural networks used to build intelligent machines. In this course, we will explore the building blocks of neural networks, which are versatile, powerful, and scalable. We will learn how to use them to tackle complex problems like the use of convolutional neural networks for image recognition.

Hamoye.com is an online learning management platform hosting schools, freelance tutors and professional trainers. Certificates issued by Hamoye can be verified, with student consent, by emailing **certificates@hamoye.com** stating student ID and course ID.
